Portfolio

Data Engineer with 3+ years of experience designing and operating scalable data pipelines on Databricks and modern data stacks (PySpark, Airflow, AWS). Experienced in building end-to-end lakehouse architectures, optimizing performance, and ensuring production-grade reliability.

SKILLS

Data Engineering & Processing: PySpark, Apache Spark, Airflow, Databricks, Delta Lake, Unity Catalogs

Cloud & Infrastructure: AWS, GCP

Data Warehousing & Storage: Delta Lake, Parquet, Data Lake architectures (Medallion), ETL/ELT

Programming: Python, SQL

EXPERIENCE

DATA ENGINEER

Bairesdev 03/2022 – Present

- Designed and maintained large-scale ETL pipelines in PySpark on Databricks, processing data across multi-layer data lake architecture.
- Orchestrated end-to-end ingestion-to-consumption workflows using Airflow and Databricks Workflows, ensuring reliable scheduling and dependency management.
- Implemented Delta Lake data governance with Unity Catalog, enabling ACID transactions, schema enforcement, and time travel for auditability
- Optimized Spark jobs and storage patterns, achieving ~50% reduction in storage costs through partitioning and performance tuning
- Developed unit tests and CI/CD pipelines (Bitbucket Pipelines) to improve pipeline reliability, code quality, and deployment automation.
- Led the migration of the company's data ingestion architecture to Databricks, enabling scalable ingestion from databases owned by multiple teams. Designed and developed the core configuration-driven ingestion framework, allowing new data sources and ingestion patterns to be onboarded with minimal code changes, while establishing standardized governance, validation, and data quality practices.

SOFTWARE DEVELOPMENT ENGINEER

Sinerware SAS, 11/2020 – 03/2022

- Designed and developed database solutions using Oracle PL/SQL, including tables, stored procedures, functions, and other database objects, with Python and Oracle APEX for application development.
- Designed and implemented ETL processes to ingest, validate, transform, and process data uploaded by users into the database.
- Provided technical support to clients, troubleshooting production issues, investigating data and application problems, and delivering fixes and improvements.
- Optimized system and database performance, reducing application load times by 95%.

INDEPENDENT PROJECTS

PAYSIM FRAUD ANALYTICS PLATFORM

Independent project – 2026

- Designed and implemented an end-to-end batch data pipeline using GCP, PySpark, Snowflake, dbt, and Airflow
- Built a medallion architecture using distributed PySpark ingestion jobs to read from GCS, enforce schemas, and load data into Snowflake
- Implemented incremental dbt models with watermark logic, avoiding full table scans and ensuring consistency during concurrent loads
- Designed a star schema with fact tables and SCD Type 2 dimensions to support time-aware fraud analytics
- Enforced data quality gates (dbt tests) including uniqueness, null checks, referential integrity, and business rule validation

EDUCATION

MSC ARTIFICIAL INTELLIGENCE – JOHANNES KEPLER UNIVERSITY – LINZ, AUSTRIA

2022–2025, Graduated with honors – GPA 1.65

BSC ELECTRONIC ENGINEERING – UNIVERSIDAD DEL VALLE – CALI, COLOMBIA

2015–2020, Thesis with honorable mention – PA 4.17/5
